- The Tour will include passing through a TSA Security Checkpoint; please bring personal documents necessary (passport, driver’s license, etc.) and don’t bring disallowed items you wouldn’t bring on a booked airline trip.
More Tour advance information:

The Austin City Council in October 2015 authorized the Aviation Department, to contract with Gensler (designer) for up to $36 million and Hensel-Phelps (builder) for up to $289 million, to complete the additional gates to the east end of the current terminal. The total project funding is $350 million which includes the architectural and engineering fees, furniture and equipment, testing and inspections and other project cost. The expansion, starting near Gate 2, will increase the number of contact gates with boarding bridges at ABIA from 24 to 33 and is anticipated to be completed in 2019.

Additionally, the expansion will provide an additional 48 acres of space for more aircraft to the existing terminal facility and supports the recommendations made in the 2003 and 2008 Master Plan Phasing Projects. The project has been certified LEED Gold.

The current Barbara Jordan Terminal at ABIA is designed to serve 11 million passengers annually. In 2016, a record high, 12.4 million passengers traveled through the airport. The expansion project will increase the airport’s capacity to 15 million passengers annually. It is anticipated that it will be at least 2025 before that level of passenger traffic is reached.

The new 5-story, 81,800 square foot Administration Building is designed to be LEED Gold, with PGAL (designer) and Austin Commercial (builder). The building will house and consolidate administrative aviation departments including finance, properties and tenant management, enterprise business services, public information, graphic, arts, music and air service development. The building will allow airport personnel to move from the mezzanine levels inside the Barbara Jordan Terminal and make that space available for possible future development and or passenger amenities.
