IN PARTNERSHIP WITH USGBC TEXAS

ESPM AND BENCHMARKING

S P E A K E R

Steve Stelzer
GBRC Program Director

Energy Star Portfolio Manager (ESPM) is a key tool for benchmarking energy consumption developed by DOE which is in wide use these days. The purpose of this presentation is to affirm its usefulness as the first step to reducing energy consumption in existing buildings by benchmarking their usage. Steve will show his training slides for a city initiative to comply with Houston's Decarbonization Policy for city buildings adopted this year. In addition, one of the portfolio buildings is a perfect example of how ESPM indicated a problem, and the subsequent retro-commissioning project to correct the problem shows us what kind of energy and energy costs are at stake.

FREE & OPEN TO THE PUBLIC, CEU AVAILABLE.
